Molybdenum mg/Kg	0.60
Iodine mg/Kg	0.80

Equine Mature Horse

Has been specifically formulated to suit the needs of the mature horse to assist with maintaining or improve body & coat condition & general wellbeing.

Mature horses have reduced uptake of key quality nutrients from their feed and this is where Equine Mature Horse will assist in supplying those high quality nutrients required.

Nutritional support is available for users of any of our specialty equine diets.

Other Specialty Equine Diets

- Equine Cool - Active
- Equine Cool - Calm
- Equine Mare & Foal
- Equine Show & Conditioner

Showing & Coat Conditioning.

- Suggested feeding levels of 2.00 - 3.00kg per day, varied to suit the horses energy demands. Levels fed, should not exceed 1% of horses live body weight. *e.g. 500 kg horse x 1% = 5 kg*

Weight Gain:

- Suggested feeding levels will be dependant on the level of desired weight gain and level of activity, generally speaking for 500 kg horse with a moderate exercise program requiring moderate weight gain a feed level of 3.00 - 4.00 kg per day would be suitable.
- *Suggested feeding levels are intended as a guide only, ensure adequate clean, cool water and roughage as pasture and or hay is available at all times.*
- *Daily roughage intake should make up no less than 1.0% (minimum) -1.50% (ideal) of pony/horse, live body weight to assist in maintaining healthy gut function.*
- *Pellets fed at levels equal to or greater than 1% of pony/horses live body weight should be fed over two or more feeds per day.*
- *Feeding levels dependent on the availability of other feeds, body condition and rate of metabolism*
- *Introduce new feeds or changes gradually over a 10 -14 day period.*
- *Free feeding program service available to assist with individual needs and goals, please contact mill for details.*
